

Diverter & Shunting Pot

Pneumatic conveyor technology

STAG Diverter & Shunting Pots are a further development in the field of pneumatic conveyor technology. They replace the use of pipe bends and complex switches.

Function

The large cross-section, or rather the large volume of the bowl, creates a calming zone in the pot. The result is pulsation-free pneumatic conveying. This principle is mainly used in the area of fuel feeding.

Experience

- Worldwide use since 1970

USPs

- Easy to use for softening
- Low weight, therefore easy to install
- Long service life with abrasive products thanks to the «product-to-product friction» functional principle
- Low pressure loss
- Space-saving due to reduced deflection radii
- also available as double-sheathed version
- Almost any deflection wrap is possible
- Can be used for most powdery bulk materials
- also available in chrome steel

Industries

- Waste to Energy
 - Power plants
 - Steel mills
 - Building materials industry
 - Paper industry
 - and many more
