

Gate Valve

Bulk material handling technology

STAG offers a selected range of special Gate Valves in their product portfolio. All of these valves are designed and manufactured to customer specifications. The special products developed at the customer's request are in use worldwide.

Function

The STAG Gate Valve is a special shut-off device in bulk material handling technology. Its function is to control the material flow by opening or closing the flow opening. The STAG Gate Valve is produced on a project-specific basis and can therefore be implemented in all dimensions.

Experience

- More than 500 special slides in use

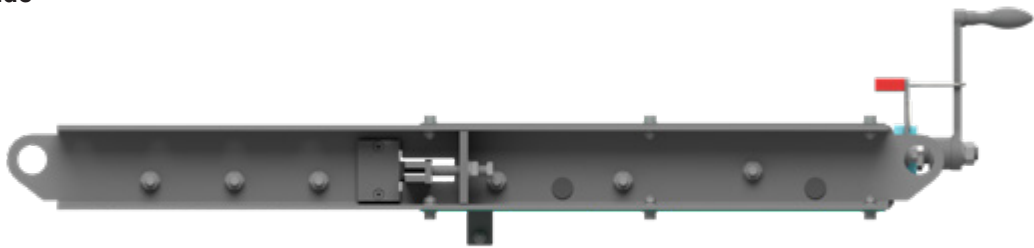

USPs

- Customized prototypes
- Durable structure
- User-friendly overall design

Industries

- Waste to Energy
 - Power plants
 - Steel mills
 - Building materials industry
 - Paper industry
 - and many more
