

Tubular Screw Conveyor

Solution for demanding conveyor applications

The Tubular Screw Conveyor is characterized by its versatility, especially at inclinations of 20 to 45 degrees. With a full-blade screw, it ensures efficient and continuous bulk material conveying in a wide range of industrial applications. An interesting feature of this conveyor is the variable incline in the infeed area, which enables precise adaptation to the specific requirements of the material to be conveyed. This flexibility makes the tubular screw conveyor a reliable solution for demanding conveying applications in various industries.

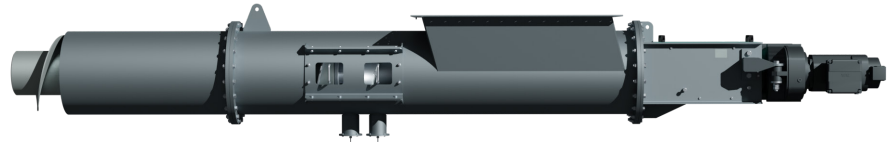

Function

The bulk material passes through the inlet to the screw conveyor located in a pipe. The material is continuously conveyed to the outlet by means of a constantly rotating screw helix.

Experience

Our Tubular Screw Conveyor has been developed in response to a specific customer request. This product has proven to be extremely successful since its launch in 2020.
