

Sampler

High-precision sampling solution

The STAG Sampler is a high-precision solution for reliable sampling in industrial environments. Designed to meet the requirements of various industries, this Sampler offers easy handling and precise results. With its robust design and innovative technology, it ensures efficient and accurate sampling for analysis and quality control. The STAG Sampler helps companies to optimize their production processes and ensure the quality of their products.

Function

The STAG Sampler is a practical and reliable tool for taking samples from containers. It can be easily retrofitted to existing systems and is mechanically fixed. To take a sample, simply loosen the wing nuts, pull the sampler out of its housing and remove the sample container. This simple handling allows samples to be taken quickly and efficiently without interrupting ongoing operations.
